Chris,

The only tube I would contemplate salvaging is B/N 122531 because it is symmetric. Suggest we allow it to be cut about 0.063" over tolerance on height, which will hopefully bring it to within 0.063" of tolerance on width. I would scrap the other 2 crosstubes.

Regards,
David

Subject: NCR D350-748-201

David,

The 350 tubes have been turning out rather well over the last few years. However, we have a batch with some large deviations. I've scrapped (2) for kinking and (1) for twist.

There are (3) 350 tubes that are too narrow:

BN	Width
Nominal	$40.90+40.90 = 81.80 \pm 0.25$
120195	$40.65+40.74 = 81.39 (-0.41)$
122531	$40.70+40.70 = 81.40 (-0.40)$
122269	$40.63+40.71 = 81.34 (-0.46)$

The tubes are at max height per dwg. Deviation is due to the tubes narrowing more than expected during stress relief. I would normally scrap a tube at these values, because of the fit problems we've had with them. But I know we've accepted tubes at these values in the past.
